DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 9-11 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification discloses assessing a user's knowledge by another person. However, claim 9, last step recites "Electronically assessing a user's knowledge. The specification fails to indicate that the assessing process is preformed by a device or a machine and it appear that the process can be preformed by a person skill in the art.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-17 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The training and student learning process in the claimed invention is mental and could be preformed in any learning institution by a person skill in the art with pencil and

paper in conjunction with any media tool. In addition, in claims 1, 7 and 12, last step of evaluations of success of training or professional development training fails to establish useful, concrete and tangible results. Also in claim 9, the step "electronically assessing said user's knowledge" fails to establish useful, concrete and tangible result because the assessment is not performed by a device or a machine (see paragraph 1 in this office action). Therefore, the claimed invention is directed merely to an abstract is that is not tied to a technological art, environment or machine which would result on a practical application producing a concrete, useful, and tangible result to form the basis of statutory subject matter under 35 U.S.C. 101.

Conclusion

3. Applicant's arguments filed 10/11/05 have been fully considered but they are not persuasive.

Applicant argues on page 3, that the cases "In re Alappat, state street Bank & Trust Co. v. Signature Fin. Group, Inc. and Arrhythmia Research Technology Inc. v. Corazonix Corp" should render the claimed invention as statutory. These cases are discussing a machine type invention. The claimed invention fails to recite a machine or a tool that can implement the claimed method steps.
